

Flexible Solutions for Natural Food Retailers

Natural Food retailers build their businesses on consumers' demand for whole, natural foods. But to run a successful operation in the digital age, you need the right technology. Some point of sale (POS) and back-office software force retailers to change their processes to use it. LOC Software is different. It's flexible and configurable, supporting natural food stores' unique workflows and processes.

Manage Every Aspect of Business Digitally

LOC's ThriVersA suite of software modules allows natural food retailers to digitally transform operations to increase operational efficiency and enhance customer experiences.

Loyalty

ThriVersA Loyalty allows retailers to create exceptional loyalty experiences, including co-op or membership program management or points donations to charities.

POS

ThriVersA POS, the browser-based, hardware-agnostic version of LOC POS software, makes it easy to create small-footprint self-checkout and deploy mobile solutions.

Cloud-Based Solutions

LOC cloud solutions are secure and reliable, allowing retailers to access applications and data wherever they're working and keep onsite IT infrastructure costs low.

Creating a Unique Experience for Customers

"Having a point of sale system that efficiently handles our unique needs is vital; LOC Software offers us a flexible solution allowing us to bring technology to our customers with ease."

— Madelyn Cataford, Director of Finance and IT, City Market Burlington VT

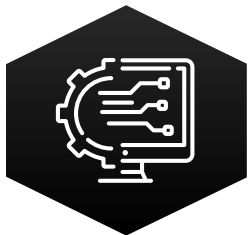

What Sets LOC Apart

LOC's architecture is designed to give retailers control and access to their data for intelligent decision-making and to incorporate best practices to streamline workflows.

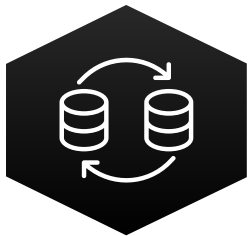

System Setup

LOC allows managers to set up screens, button configurations, and peripherals across all devices from a central location. Setup is designed to save time and ensure conformity.

500+ Function Point of Sale Software

Natural food retailers' inventories are diverse, both in the range of products and in how they're sold. LOC makes checkout and payment quick and easy for cashiers and customers.

Data Tables and Data Exchange

LOC gives retailers control over where data resides and reporting format. Managers can arrange system tables by store or even by POS terminal, controlling everything centrally.

Browser-Based Software

Hardware-agnostic LOC Software allows employees and managers to access POS functionality and data anywhere to enhance customer experiences and increase efficiency.

Enterprise Management

Cloud deployment and centralized management facilitate multi-store management. Managers can purchase, track inventory movement, and monitor profitability for all locations.
