

One Solution for the Entire C-Store Operation

Delivering excellent customer experiences in the store, at the prepared foods counter, and at the fuel pump while managing diverse inventory is too complex for many convenience store point of sale (POS) systems. But not for LOC. Our software solutions empower c-stores to create a total POS and back-office system with features for every part of the operation. LOC C-store solutions are also easy to deploy and make data accessible for reporting and smart decision-making.

Management and Visibility Over Every Sale

LOC's ThriVersA suite of software modules gives C-stores the flexibility to build a single store management system that streamlines workflows and reporting.

Fuel

ThriVersA Fuel allows operators to manage non-branded fuel sales from within LOC's point of sale system – at a fraction of the cost of other systems. It generates real-time reporting for compliance and visibility into fuel volumes and pricing.

Loyalty

LOC offers the industry's most flexible loyalty rewards solution, allowing c-stores to choose from a wide range of different programs. ThriVersA Loyalty also integrates with grocery or other partner programs for cross-promotions that build store traffic and revenues.

Self-Service

Configure self-service ordering at prepared foods with ThriVersA Self-Service. Hardware-agnostic LOC allows stores to create small-footprint kiosks that keep lines short and immediately communicate orders to the kitchen.

Easy Implementation and Enhanced CX

"The transition was effortless, with minimal training required, and most importantly, our customers found the system easy to use."

— Holley's Piggly Wiggly

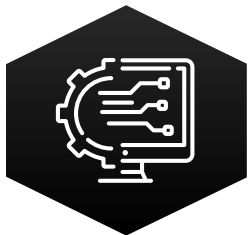

What Sets LOC Apart

LOC is designed with businesses' success in mind, ensuring managers have the data and insights they need to operate a profitable, growing business.

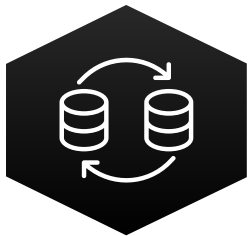

System Setup

Managers can configure all device screens, even for different parts of the store, centrally and deploy them across the operation. Managers can also monitor and control settings for IT hardware and peripheral devices.

500+ Function Point of Sale Software

LOC is designed for efficient transactions, whether the customer is purchasing fuel, ordering to-go foods, lottery tickets, store items, or any combination. LOC also supports all payment types, including contactless and mobile wallet.

Data Tables and Data Exchange

LOC gives c-store operators total control of their data, deciding where it resides and how to configure reports. Managers can choose between report templates or easily create reports from pivot tables.

Browser-Based Software

LOC Software gives C-store teams access to POS functionality on any device, so they can complete transactions, update information, and access data anywhere in the store.

Enterprise Management

Managers responsible for multiple locations can access store-level data from any location. LOC enables purchasing, transferring inventory, and calculating pricing for all stores centrally and pushes updates to all stores.
