

Multi-Tenant Software

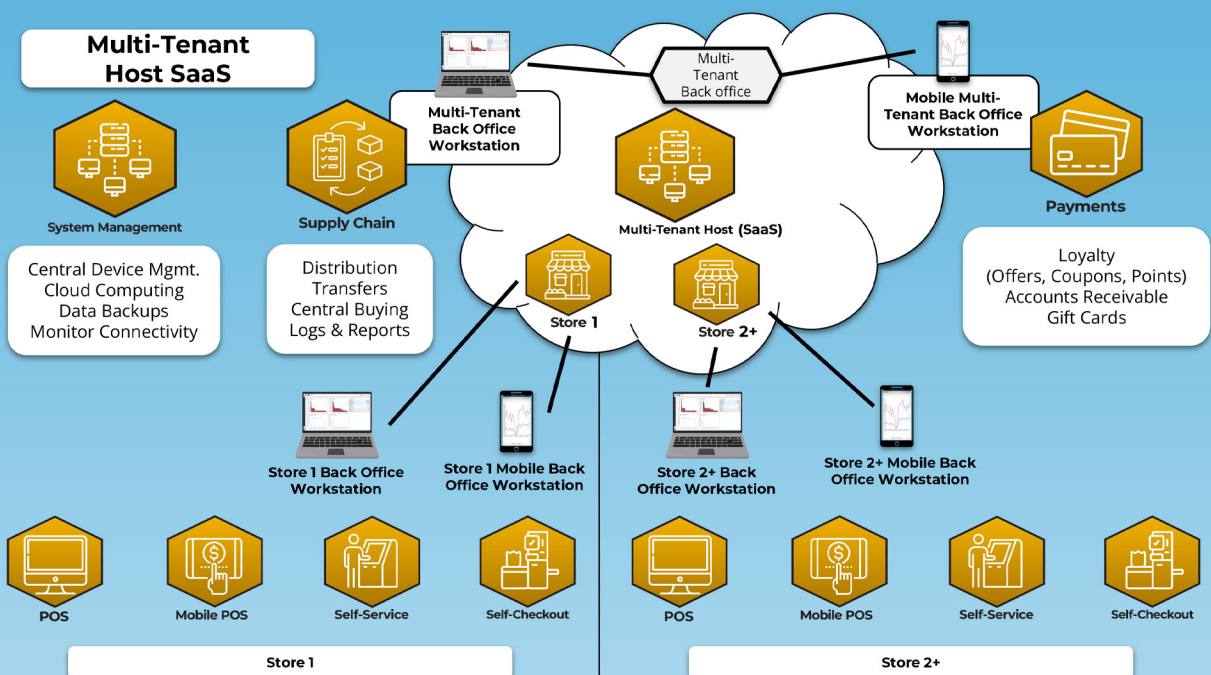

Real-Time Visibility & Data-Sharing

Technology implementation will empower you to achieve greater operational efficiency and enhance customer experiences. But unfortunately, it can sometimes stall enterprise growth. An organization that deploys infrastructure for individual stores will find scaling complex, time-consuming, and costly.

Multi-tenant grocery and retail management software from LOC lets you eliminate those pain points. Our software architecture is built on a single, shared database for the entire organization. It lets you operate more efficiently and competitively today and, when your business grows, to add new points of engagement and store locations seamlessly.

The Impact of LOC Multi-Tenant Software on Every Part of Your Business

- **Enterprise Back Office:** Multi-directional management and real-time visibility
- **System Management:** Centralized device monitoring and management, cloud computing, and data backup
- **Store Back Office:** Work from a central database with no local installation necessary
- **Store POS:** Traditional point of sale, mobile POS, self-service, and self-checkout
- **Payments:** Centrally managed loyalty points, offers, coupons, and gift cards
- **Supply Chain:** Distribution transfers, central or local buying, logs, and reports

How LOC Multi-Tenant Software Works

With multi-tenant software from LOC, your entire organization runs from a single system. Enterprise administrators and individual stores share data freely. Managers directly and securely access their stores from the multi-tenant system, which allows them to respond quickly to market changes to stay competitive. Multi-tenant architecture eliminates the lag from the time a store manager or corporate executive enters data until it is available. Data is in real time, with no sync required. Enterprise administrators also have the ability to manage all lanes and the devices and peripherals stores use to ensure they are all updated, configured correctly, and deliver consistent experiences.

Our SaaS model software allows you to host your grocery or retail management system in the cloud, which streamlines system management and data backup. It also decreases the IT hardware required on-site and less labor required to update and maintain it. We've also designed our multi-tenant software so users can be segmented to have different access levels, ensuring team members always have the tools and information they need at their fingertips without risking security.

The Benefits of Multi-Tenant Software

- Manage multiple stores practically and efficiently
- Centralize item maintenance, receiving, and inventory tracking
- Control costing and pricing company-wide
- Avoid duplicative work and keying errors
- Eliminate data silos and data sync
- Streamline device, software, and system maintenance

Give Your Business the Benefit of Industry and Software Development Expertise

For over 30 years, LOC Software has been at the forefront of retail technology. Our configurable suite of solutions empowers high-volume, independent merchants to optimize retail performance. Its flagship suite of software modules, ThriVersA, includes point of sale, back office, headquarters, eCommerce, self-service, loyalty, and more, giving retailers the freedom to design the solution that supports their unique processes and workflows. Our cloud and on-premises retail solutions provide the flexibility to access and manage operations from anywhere, ensuring your business runs smoothly—whether you're in-store, at headquarters, or on the go.
